Advanced Search - Category Filter

The **Advanced Search** is a search function in Navigate that lets you create unique cohorts of students based on the layering of various search parameters. The search results are used as the foundation for building appointment campaigns or tracking student progress. Queries pull lists of currently active students that fit the search parameters. Information in the results reflects *current* student data.

It is important to note that the **Advanced Search** is not meant to be a historical search. The tool can be used to conduct historical searches of currently active students. A student is considered active if they're currently enrolled in courses and if they attended a previous course and did not enroll in the current term.

Service indicators, freshman cohorts, holds, student program cohorts, and minor programs are located in the **Category** filter of the Student Information section of the **Advanced Search**.

Navigator – Advanced Search Categories	
Categories	**Description**
